The present sequence represents a Mycobacterium tuberculosis pr Products from the present invention, which describes protein fr and nucleic acid fragments derived from M.tuberculosis, can be the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the of or vaccination against tuberculosis caused by M. tuberculosis

tuberculosis,

          The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 165

The present sequence is that of the Mycobacterium current with strain H37Rv gene Rv1932 product, designated Tpx. This is one of 31 immunodominant secreted or cytosolic Mtb proteins of strain H37Rv (see AAW50725-59) discovered through the use of 2-dimensional liquid phase electrophoresis coupled with an in vitro interferon-gamma assay and liquid chromatography-mass spectrometry. The immunogens stimulate a strong interferon-gamma response from T cells of M. tuberculosis infected mice. The invention provides vaccine compositions for boosting immunity to mycobacteria when administered in mid-life to a subject who has been vaccinated neonatally or in early childhood with BCG and in whom

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogen polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the inventi and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ۲
```

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to

ç

Example 1;

SEQ ID

NO 23164; 1481pp; English.

New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc immunogenic fragments of P. acnes polypeptides. The invention cadditionally encompasses expression vectors and host cells comprising a copolynucleotide of the invention; antibodies against polypeptides of the comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes complyeptide and an isolated T cell population comprising T cells prepared complyeptide and an isolated T cell population comprising T cells prepared complyeptides, antibodies, fusion proteins, T cell populations, or comprising the present of the composition of the inventod and kit complyence of proteins, and a method for inhibiting the presence or absence of P. acnes in a compatient; and a method for inhibiting the development of P. acnes in a compatient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne collypeptides are useful for diagnosing, preventing or treating acne collypeptides are useful for diagnosing, preventing or treating acne collypeptides are useful for a p. acnes the polypeptides are useful for diagnosing, preventing to the comparison or proteins. The polynucleotides can also be used as probes or primers for conclete acid hybridiastion. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

                                                                                                                                                       맑
                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                  CC TARF70984 to AAF71133 encode the Corynebacterium glutamicum stress, CC resistance, and tolerance (SRT) proteins given in AAB78871 to AAB79020. CC The C. glutamicum SRT genes (I) can be used in vectors (II) for Cexpression in host cells and production of fine chemicals, such as, an CC organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), CC a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a CC saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine CC chemical production can be modulated. The presence of (I) or the SRT CC compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine CC containing them can be used to map the genomes of organisms related to C. CC clutamicum, to identify and localise (I), (II), (III) and host cells CC containing them can be used to map the genomes of organisms related to C. CC clutamicum, to identify and localise (I) glutamicum sequences of interest, in evolutionary studies, in determination of SRT protein regions required CC for function, in modulating the SRT protein activity, and in modulating the activity of an SRT pathway. (II) are used to permit C. glutamicum to conditions to it. (I) and protein molecules encoded by it increase the CC survive in an environment that is normally environmentally or chemically hazards and CC survive growth conditions. By increasing the growth rate or canintaining a normal growth rate in poor or toxic conditions, the yield, continued are selected or production and/or efficiency or production of fine chemicals from a cculture may be increased.
                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                         Query Match

AAP71138 to AAP71357 encode the Corynebacterium glutamicum homeostasis and adaptation (HA) proteins given in AAB79023 to AAB79242. The C. Glutamicum HA genes (I) can be used in vectors for expression in host cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or pyrimidine base, nucleoside, nucleotide, lipid, saturated or unsaturated catturated acid, ciatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, glutamine, glutamate, alanine, aspartate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleucine, arginine, proline, histidine, tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium diphtheriae. (I) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or Brevibacterium. The HA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       25-JUN-1999

          The invention relates to new Proteus mirabilis polypeptides and polymeuleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                            The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                         The invention relates to a method of identifying compounds that modulate a newly identified mar regulated (NIME) polypeptide activity. The method comprises contacting an NIME polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the modulators. NIME nucleic acids and polypeptides are used in the treatment of microbial infections, and in screening for modulators of NIME expression and activity. These modulators can be used to reduce the infectivity of a microbe on a surface, and the virulence of a microbe in a subject suffering from an infection. ANU29379-ANU29379 represent Escherichia coli NIME amino acid sequences of the invention
                                                                                                                                                                                                                                  Sequence 168 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying compounds that modulate a newly identified mar regulated polypeptide activity, useful as antimicrobial compounds, involves contacting the polypeptide with a test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Levy

                                                                  문
                                                                                                           S
                                                                                                                                                                                                                                                                                            The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are cources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing theory of the genes in plants, animals or microoyganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. Cluminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and genes, proteins, vectors containing the genes and have also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as bioposticides. Other uses of the genes and the area as virulence factors and for identifying targets of human diseases for which P. contains a model (particularly plague and whooping cough). This generals are as of the isolated P. luminescens proteins
                                                                                                                                                             Matches
                                                                                                                                                                                     Query Match

The C. CC glutamicum HA genes (I) can be used in vectors for expression in host CC cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or CC pyrimidine base, nucleoside, nucleotide, lipid, saturated or unsaturated CC fatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, CC polyketide or enzyme. The amino acids produced can be lysine, glutamine, CC glutamate, alanine, aspartate, glycine, serine, threonine, methionine, CC cysteine, valine, leucine, isoleucine, arginine, proline, histidine, CC cysteine, valine, leucine, isoleucine, arginine, proline, histidine, CC tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium diphtheriae. CC (I) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or Brevibacterium. The HA CC proteins encoded by the (I) are used to maintain homeostasis in C. Conditions or help the microorganism to adapt to different environmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the genome sequence of Listeria CC monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of CC it are useful for selecting probes and primers for detecting genes in L. CC monocytogenes and related organisms, and for studying genetic composytogenes and related organisms, and for studying genetic composytogenes and other genomes. The present sequence is a protein concoded by the genome sequence of the present invention. Proteins compositely, identification of L. monocytogenes and related organisms, and contributes, identification of L. monocytogenes and related organisms, and contributes, identification of L. monocytogenes and related organisms, and contributes is and biodegradation, especially biosynthesis of vitamin compositions that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are also useful for sequence and proteins encoded by it are useful in pharmaceutical and concodines compositions for the treatment or prevention of infections by L. Compositions for the treatment or prevention, but was obtained contributed in the part of the printed specification, but was obtained contributed in the contributed and the sequence data for this patent in the composition of the printed specification, but was obtained contributed in the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contributed and the contri

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
